Excerpt: .blus grass was cut the previous fall (1914) on October 12. The alfalfa on the right was not cut after August 30, in 1914 and came through the winter uninjured. In the northern states cutting or pasturing after the first week in September is poor practice. Fig. 38. Turkestan Alfalfa Makes a Scant Fall Growth. Perhaps this is one reason for its hardiness. Fig. 39. Transplanting in this test gave very poor yields of hay in comparison with the broadcasted plots. Alfalfa Needs a Reasonably Fertile Soil Because alfalfa is a great soil enricher and can be grown on a wide range of soils, all the way from heavy clays to sandy loams, it is often tried out on the poorest and most worn-out part of the farm. If the soil happens to be well supplied with limestone the crop will do fairly well...
